

THE BREWER HybriGel™ FOAM DIFFERENCE

- Advanced Pressure Management
- Gel directly infused during manufacturing process
- Open Cell Structure allows for airflow and body temperature management
- Made in the U.S.A.

HybriGel™ foam material is **EXCLUSIVE** to The Brewer Company, LLC.

NEW PATENTED TECHNOLOGY EXCLUSIVE TO BREWER

INTRODUCING a new foam technology exclusive to BREWER. viscoelastic “memory foam” infused with GEL provides the ultimate in comfort and pressure management.

COMFORT
The Brewer HybriGel™ foam is uniquely designed to deliver lower average body pressure than other advanced comfort materials.

PRESSURE MANAGEMENT
The body needs proper support. While ordinary viscoelastic foams can sink and hammock, HybriGel™ foam works to support the body for superior pressure relief and alignment.

OPEN CELL STRUCTURE
Heat builds up when your body is in contact with a support foam material. While other memory foams can trap heat against the body, HybriGel™ foam combines an open cell structure with the support gel to dramatically increase airflow and cool the surface temperature.
