

Brewer LiftMate™ Patient Lift

Enhance throughput & safety with LiftMate™.

While the latest imaging suites may feature power radiology tables, the majority still use conventional, fixed-height radiology tables or require a different solution altogether.

Yet, you still want to maximize imaging throughput without compromising the safety of patients or staff. Now, you can with a cost-effective, patient-handling breakthrough – LiftMate.

- **Optimize the value of your fixed-height imaging tables** – Safely & efficiently handle more challenging patients to improve throughput and prevent costly bottlenecks.
- **Reduce the risks associated with weight-bearing X-Rays** – Quickly position patients for foot, ankle and knee images while offering them the confidence of a sturdy platform with handrails on both sides.
- **Cost-effectively support multiple imaging rooms with a single LiftMate** – Mobile and maneuverable design makes it easy to move LiftMate from one imaging room to another.

Brewer

LiftMate™ helps you conveniently optimize imaging department ROI.

From limited mobility and ill individuals, to bariatric cases, patients can pose all kinds of challenges for your radiology department.

Because most facilities only have power radiology tables in some of their rooms, challenging patients can create bottlenecks in the schedule.

Should one of those patients require a weight-bearing X-Ray that can present its own set of complications, putting patients and staff at risk of injury from falls.

Fortunately, LiftMate is a versatile breakthrough specifically designed to address your patient-handling challenges.

Safely & efficiently handle challenging patients

- Quickly and effortlessly get patients up onto and off of X-Ray tables and fluoroscopy tables.
- Floor-level access and handrails on each side help assure confident patient transitions, while minimizing the risk of patient injury due to falls.
- Push-button activation minimizes technician interaction – helping prevent nagging, lifting-related injuries that can lead to missed days of work or costly worker compensation claims.

Quickly position patients for weight-bearing X-Rays

- No cumbersome steps or stools for challenging patients to have to negotiate.
- Sturdy platform with handrails on both sides enhances patient safety and confidence.
- Convenient way to safely get foot, ankle and knee X-Rays.
